MSP (Assembly on site)

Continuing the innovation of the reusable fitting VNRS® for Silicone hoses TRESSIL®, GECITECH is pleased to inform you about its new assembly concept MSP® (Assembly on site).

This screwed fitting in stainless steel 3l6L, is adaptable for the range of GECITECH hoses GSI NT and GSI NTP®.

The MSP® fitting can be assembled on site without special tools and can be re-used with a new compression ring.This design is aseptic inside and outside thanks to a silicone seal in the ferrule groove of the fitting. This concept is also non galling due to the use of a coupling ring produced in special polymer.

The screwing ensures a perfect compression and holding of the hose extremity as well as the locking of the ferrule into the fitting groove, making it “monobloc”, like a swaged system.

The MSP® line exist with all type of fittings (SMS, DIN, CLAMP, RJT, IDF, ISS, FIL, GAZ, NPT, JIC, BRIDES, ...)

To assure the best assembly, we propose an appropriate wrench.The MSP® fitting is a GECITECH registered trade mark and GECITECH patent pending.
