VNRS (Screwing Reusable Fitting)

VNRS® Reusable Fitting

The VNRS® is a reusable fitting in 316L stainless steel, available for various fitting types (CLAMP,DIN, Flanges,...) which can be assembled on all our Silicone Tressil® hoses.

This screwed fitting allows many assemblies and disassemblies without the need for special tooling and without the risk of galling. In addition, it is cleanable with normal CIP procedure.

The connection hose/fitting is specially manufactured in order to avoid differences in diameter and convey directly the product in the hose according to the NRS® concept (Non-Retention System) without any bacteriological gaps.

VNRS® is a GECITECH registered trade mark
